PROFILE

Experience coordinating façade materials, supplier testing and deliveries in Singapore, international shipping documents and automotive production plans. Use Excel, Python and process analysis to support scheduling.

EDUCATION

National University of Singapore | MSc Civil Engineering Aug 2025 - Jan 2027

Transport focus; research in transportation information and control.

Chang'an University | BEng Transportation Engineering Sep 2021 - Jun 2025

GPA 3.16/5.0; approximately top 15% of the cohort.

EXPERIENCE

Far East Facade | Project Engineer, Engineering Department Jun 2026 - Present

- Coordinate 15 façade material types and 5 suppliers through sampling, testing, delivery and installation; join weekly contractor meetings and prepare monthly progress reports.
- Support the project manager in subcontractor negotiations on prices, equipment and peak-period staffing; track materials with a status board and Python email parsing.

Chery International | Product Intern May 2026 - Jun 2026

- Mapped KD (knock-down) development, production and logistics into a Gantt plan; aligned milestone information and used overseas sales trends to inform scheduling.

Expeditors | Supply Chain Assistant Dec 2024 - Apr 2025

- Coordinated carriers, clients and customs brokers; prepared and reviewed declarations. Improved existing Excel workflows and checks, raising document-processing efficiency by approximately 30%.

PROJECTS

Civil Buddy | Packing and Engineering Workflows Jul 2026 - Present

- Designed the material-input, packing, approval and visualization flow; deterministic tools generate coordinates and container counts, supported by standard procedures for 66 roles.
- Wrote the packing PRD, user flow and acceptance checklist; passed 128 deterministic evaluations and recorded refusal reasons and recovery steps in execution traces.

Lean Construction | Time-and-Motion Study Feb - Mar 2026

- Analyzed three filmed formwork cycles using process-flow diagrams, utilization charts and crew balancing; measured 297 seconds of waiting, approximately 46% of a cycle.
- Proposed smaller batches, a revised layout and balanced crews; calculated a cycle-time reduction from about 10 minutes to 6 minutes 40 seconds, with no intermediate buffer.

Linear Scheduling Method | Coursework Jan - Feb 2026

- Prepared linear schedules for canal excavation, foundation treatment and road paving; used activity tie and divergence points to identify the controlling path.
- Calculated allowable production-rate adjustments and checked the results independently with an LSM tool, producing schedules and activity-rate ranges.

SKILLS

Operations: material planning, supplier coordination, testing, transport, reporting, KD production planning

Tools: Excel, Python, Gantt charts, Linear Scheduling Method (LSM), time-and-motion studies, crew balancing
