EDUCATION

National University of Singapore (NUS) MSc Civil Engineering · Transportation & Urban Transport Aug 2025 – Jan 2027

- Intelligent transport & simulation. Coursework: Machine Learning Foundations (CEE5901QA), Advanced AI Methods (CEE5901QB); dissertation CE5001, coursework CE5212 (transport AI).

Chang'an University (211) BEng Transportation, Excellence Engineer Programme

Sep 2021 – Jun 2025

- Top ~15% of cohort. Coursework includes Advanced Mathematics I (93), Computing (90), Python programming, engineering economics.

PROJECTS

Civil Buddy open-source agentic AI workspace · author

Jul 2026 – present

- An agent workspace ("Codex for civil engineering"): 66 role skills in 16 categories run through SOPs; hard numbers come from deterministic engines — the model never writes coordinates or container counts; high-risk writes require human confirmation.
- 128 automated packing evaluations (16 lanes × 8 rounds; re-run Sep 2026, 128/128 PASS, artifact committed); shadow evaluation of the deterministic path vs LLM tool-calling runs in CI — hard numbers must come from tools.
- 200+ commits, CI smoke tests, trial packages on GitHub Releases; one-page PRD with acceptance criteria; refusals carry reasons, retries degrade through an audit trail, cost circuit-breaker.

NAVSIM ability ladder — what caps open-loop planning open source · self-study

Aug – Sep 2026

- Built a 10-agent ladder (ConstantVelocity 0.233 → Human 0.945) on 563 scenes and one metric cache; paired bootstrap 95% CI on every rung.
- Kinematics first: 0.233 → 0.580, NC failures 39% → 12%. GT boxes do not close the gap; the map does (DAC 0.737 → 0.950).
- Learned controls: a model asked to draw the whole line scores 0.527 (hand rule 0.730); let the rule draw the line and the model only pace it and it reaches 0.763 — a learned part earns its place only in the right slot.
- 62 of the 64 mini logs are the eval logs, so learned scores are contaminated; re-scored all agents on 135 held-out scenes and downgraded what stopped separating.

NUS CE5212 traffic coordination individual project

Mar – Apr 2026

- "Rules propose, the LLM only approves": 43 of 44 candidate actions approved correctly (97.7%, course log) — more reliable than letting the model decide directly.
- Two failure findings: direct LLM decisions hallucinate state; synchronous calls slow the simulation (Bus 95 delay +2.2 min) — approval belongs async / in shadow mode.

NUS CE5203 AYE weaving-bottleneck study group of 4

Mar – Apr 2026

- YOLOv11 video counts calibrated a SUMO network; compared variable speed limits and ramp metering across 12 scenarios; delivered mitigation recommendations.

NUS CE5001 flood resilience of the bus network dissertation

Jan – Apr 2026

- ~3,500 lines of Python / 10 modules; 793 bus services, 5,201 stops; 200 paired rule-vs-model experiments; on dense networks the rule-based plan cut relevant travel time by 62.2%.

EXPERIENCE

Far East Facade (Singapore) Project Engineer

Jun 2026 – present

- Track 15 façade material types and inbound plans on a kanban across 5 suppliers; a Python tool parses supplier shipment / test emails into arrival batches and inspection results, replacing manual checking.

Chery International Product Manager Intern

May – Jun 2026

- Competitive win/loss and VOC mining for overseas markets — 15 user personas, 5 VOC reports; bubble-chart market positioning (length / price / registrations) with a sales-trend forecast.

CaiXun Group (Colorful-Clouds) Product Manager Intern

Jun – Jul 2025

- Wrote 3 PRDs (features, interaction logic, acceptance criteria), all approved; built 5 Axure core-page prototypes that entered the development schedule.

Expeditors Supply-Chain Assistant

Dec 2024 – May 2025

- Coordinated carriers, clients and customs brokers in an English-speaking environment; issued and reviewed about 50 customs declarations per day.

SKILLS & OTHER

- Product & agents:** PRD, Axure, acceptance criteria; agent specs (tool calls, error handling); competitive win/loss, VOC, personas.
- AI & evaluation:** NAVSIM PDMS comparison and failure attribution; shadow evaluation; tools compute, the LLM orchestrates.
- Engineering & languages:** Python, SUMO simulation, YOLOv11 counting, Excel; English-medium MSc; English working environment in Singapore.
- Competitions & campus:** TikTok TechJam 2026 — four-track submissions (results pending); Youth League branch secretary.
