PROFILE

Coordinate engineering materials, supplier testing and delivery schedules. Experience in international shipping documents and automotive KD planning, supported by Excel, Python and process analysis.

EDUCATION

- National University of Singapore | MSc Civil Engineering**Aug 2025 - Jan 2027
- Transport focus; research in transportation information and control.
- Chang'an University | BEng Transportation Engineering**Sep 2021 - Jun 2025
- GPA 3.16/5.0; approximately top 15% of the major.

EXPERIENCE

- Far East Facade | Project Engineer, Engineering Department**Jun 2026 - Present
- Coordinate 15 façade material types and 5 suppliers across sampling, testing, arrival and installation milestones; attend contractor meetings and prepare monthly progress reports.
 - Assist the project manager in subcontractor discussions covering prices, equipment and peak-period staffing; support follow-up with a status board and Python email parsing.
- Chery International | Product Intern**May 2026 - Jun 2026
- Mapped KD development, production and logistics into a full-cycle Gantt plan; coordinated milestone information and used overseas sales trends to inform planning.
- Expeditors | Supply Chain Assistant**Dec 2024 - Apr 2025
- Coordinated carriers, clients and customs brokers; issued and checked declarations. Improved existing Excel workflows and validation, increasing document-processing efficiency by approximately 30%.

PROJECTS

- Civil Buddy | Packing and Engineering Workflows**Jul 2026 - Present
- Designed the material-input, packing, approval and visualization flow. Deterministic tools produce coordinates and container counts, while 66 role SOPs organize engineering tasks.
 - Wrote the packing PRD, user flow and acceptance checklist. All 128 deterministic packing evaluations passed, with refusal reasons and failure recovery represented as traceable workflow steps.
- Lean Construction | Time-and-Motion Study**Feb - Mar 2026
- Analyzed three filmed formwork cycles using process-flow diagrams, utilization charts and crew balancing; measured 297 seconds of waiting, approximately 46% of a cycle.
 - Designed smaller batches, a revised layout and balanced crews. The proposed schedule reduced calculated cycle time from about 10 minutes to 6 minutes 40 seconds and removed an intermediate buffer.
- Linear Scheduling Method | Coursework**Jan - Feb 2026
- Prepared linear schedules for canal excavation, foundation treatment and road paving; identified controlling activity paths through tie and divergence locations.
 - Calculated production-rate float and independently checked the analytical results with an LSM tool, producing schedules and activity-rate adjustment ranges.

SKILLS

Operations: material planning, supplier testing, transport, progress reporting, KD scheduling
Tools: Excel, Python, Gantt charts, LSM, time-and-motion analysis, crew balancing
