github.com/LUOaini1213 | luoaini1213.github.io (demos and reports)

PROFILE

- Experience in supplier coordination, shipping documentation and KD (knock-down) project coordination around testing, shipment, arrival and installation milestones.
- Turn repetitive checks into Python scripts, and model scheduling and fleet problems as linear / integer programs compared with solvers and simulation.

EDUCATION

National University of Singapore | MSc Civil Engineering (Transportation) Aug 2025 - Jan 2027
Transport focus; coursework: transport planning, intelligent transport and simulation, ML Foundations.

Chang'an University | BEng Transportation Engineering Sep 2021 - Jun 2025
GPA 3.16/5.0; approximately top 15% of the cohort.

EXPERIENCE

Far East Facade | Project Engineer, Engineering Department Jun 2026 - Present
- Coordinate testing and deliveries for 15 façade material types across 5 suppliers; align installation milestones in weekly contractor meetings.
- Support subcontractor discussions on price, equipment and staffing; prepare monthly reports and parse supplier emails in Python to track material status.

Chery International | Product Intern May 2026 - Jun 2026
- Maintained the KD project Gantt plan; aligned development and production milestones with shipments and arrivals of sample vehicles and production parts.
- Prepared import eligibility documents, supported export compliance checks and followed up on transport and customs clearance.

Expeditors | Supply Chain Assistant Dec 2024 - Apr 2025
- Coordinated carriers, clients and customs brokers on shipping and clearance updates; prepared and reviewed customs declarations.
- Improved Excel workflows with VLOOKUP and pivot tables, raising document-processing efficiency by about 30%; consolidated required fields and common errors into a declaration-review checklist.

PROJECTS

Civil Buddy | Packing and Container Planning (open source) Jul 2026 - Present
- Built a workflow from material input to packing, human approval and container plans; deterministic tools calculate coordinates and container counts.
- Wrote the packing PRD and acceptance checklist; 128/128 evaluation runs completed, 57 judged not to fit and handed back to a person; refusal reasons and recovery steps recorded.

Manufacturing Rolling Replanning | Rescheduling after Machine Failure Oct 2026
- On a breakdown, completed operations are frozen and work in progress keeps its machine and remaining time; HiGHS proposes a new schedule, SimPy replays the original from the same snapshot, and a person confirms before execution advances.
- In the synthetic first-failure comparison the candidate completes 4/4 jobs versus 2/4; after a second breakdown, in-process machines and completed operations are still preserved.

LP / MIP from Scratch | Operations Research Sep 2026
- Implemented two-phase simplex, branch-and-bound and Gomory cuts, cross-checked against HiGHS. Minimum-fleet model: the assignment formulation needs 1 node versus 21–31 for big-M; tightening big-M in production planning cut nodes from 19 to 5 with the same optimum.

Lean Construction | Course Project Feb - Mar 2026
- Video study of three formwork cycles: mapped process flow and crew balance, finding 297 seconds of waiting (about 46%); smaller batches and a revised layout cut the calculated cycle from about 10 minutes to 6 min 40 sec.

SKILLS

Operations: supplier coordination, shipment tracking, import/export documentation, KD project coordination
Planning: LP / MIP (HiGHS), SimPy simulation, Gantt charts, process mapping, time-and-motion studies
Tools: Excel (VLOOKUP, pivot tables), Python, SQL. **Languages:** Chinese (native), English (working)
